Professional Summary

Cyber Security undergraduate with internships in SIEM monitoring, log analysis, vulnerability assessment, and penetration testing. Independently builds security tools for threat detection, incident investigation, and network assessment. Seeking an entry-level SOC Analyst or Cybersecurity Analyst role.

Technical Skills

Security: SIEM monitoring, log analysis, alert triage, incident analysis, vulnerability assessment, penetration testing, OSINT, reconnaissance, EDR alert review, MITRE ATT&CK, Sigma-style rules

Tools: Nmap, Wireshark, Burp Suite, Kali Linux, Slither, Git, Docker

Development: Python, FastAPI, Flask, Streamlit, scikit-learn, REST APIs, PostgreSQL, SQLite, Redis, Celery

Work Experience

IT Intern | Askari Bank | July–September 2024

- Supported threat identification through security-log analysis and suspicious-activity escalation by monitoring SIEM dashboards for anomalous behavior.
- Supported internal security assessments through vulnerability-review assistance and security reporting by analyzing findings and documenting potential issues.

Cybersecurity Intern | KaiRiz Cyber Technology | June–July 2024

- Completed penetration-testing work on one assigned website, documented through findings and remediation reports, by conducting OSINT, reconnaissance, Nmap scanning, and vulnerability assessment.
- Supported security-control review through EDR alert analysis by examining alerts and documenting observations.

Projects

Socluma | Python, FastAPI, React, PostgreSQL, Redis, Docker

- Built a SOC platform independently, bringing telemetry, detection, and investigation into one workspace through Sigma-style rules, MITRE ATT&CK mapping, and AI assistance.
- Enabled traceable investigations with evidence timelines and audit logs by integrating authenticated Windows/Linux collectors, tenant isolation, and granular permissions.

Sentinel IDS | Python, Streamlit, scikit-learn, SQLite

- Achieved **96.59% precision and 74.49% F1 on 22,544 NSL-KDD test records** by training and evaluating a Random Forest anomaly detector.
- Enabled alert tracking with saved scans, analyst notes, and status updates by building a SQLite-backed dashboard with batch analysis and exports.

Contract-Radar | Python, Slither, SQLite, Docker

- Expanded Solidity security analysis with **11 custom detector classes** by combining Slither with compiler-aware AST/IR checks and source-level remediation guidance.
- Verified scanner behavior with **108 passing tests and 90.21% scanner coverage** through unit, security, and integration testing.

Education

BS in Cyber Security | CASE Sir Syed Institute of Technology, Islamabad

2023–2027 (Expected)

Intermediate in Computer Science | HITEC College, Taxila

2021–2023

Certifications

- **OPSWAT ICIP** — August 2025 | (ID: gefI4pLJjQ)
- **Junior Penetration Tester learning path — TryHackMe** — July 2025 | (ID: THM-J4NM05NDNN)
- **Certified Ethical Hacker (CEH) — EC-Council** — In progress
